

WHAT IS CLAIMED IS:

5

1. A recording medium readable by a
computer, tangibly embodying a program of
instructions executable by the computer to modify a
document including a plurality of areas, a part or
10 all of said plurality of areas including
identification, said program including the steps of:
inputting said document;
inputting an instruction to said plurality
of areas specified by the identification;
15 modifying the document according to said
instruction inputted to said plurality of areas
specified by the identification; and
outputting said document.

20

2. The recording medium as claimed in
claim 1, wherein said document is in a fixed format
25 including a comment, and said identification is
included in the part or all of said plurality of
areas as the comment.

30

3. The recording medium as claimed in
claim 1, wherein said fixed format is an HTML
(Hyper-Text Markup Language).

35

4. The recording medium as claimed in claim 1, wherein an area of the document includes another area by taking a nesting structure.

5

5. The recording medium as claimed in claim 1, wherein said program including the step of
10 inputting a name of an area, a start line of the area and the number of lines included in the area as the identification.

15

6. A document modifying apparatus, modifying a document separated into a plurality of areas, a part or all of said plurality of areas
20 including identification, said document modifying apparatus comprising:

means for storing said plurality of areas to a memory;

25 means for inputting an instruction to said plurality of areas specified by the identification;

means for modifying the document according to said instruction inputted to said plurality of areas specified by the identification; and

outputting said document from the memory.

30

7. The document modifying apparatus as
35 claimed in claim 6, wherein said document is in a fixed format including a comment, and said identification is included in the part or all of

said plurality of areas as the comment.

5

8. The document modifying apparatus as claimed in claim 6, wherein said document modifying apparatus further comprising means for inputting a name of an area, a start line of the area and the number of lines included in the area as the identification.

15

9. A document constructing system, comprising:

a storage unit;
a document storing unit storing a document including a plurality of areas, a part or all of said plurality of areas including identification, to said storage unit;

an instruction inputting unit inputting an instruction to said plurality of areas specified by the identification;

a document modifying unit modifying the document according to said instruction inputted to said plurality of areas specified by the identification; and

a document transmitting unit transmitting said document to a network.

35

10. The document constructing system as claimed in claim 9, further comprising a client unit

including a displaying unit, receiving said document from the network, and displaying said document on said displaying unit.

5

11. The document constructing system as claimed in claim 9, said instruction is inputted from an application utilizing said document, to said plurality of areas specified by the identification, by said instruction inputting unit.

15

12. The document constructing system as claimed in claim 9, wherein said document is in a fixed format including a comment, and said identification is included in the part or all of said plurality of areas as the comment.

25

13. The document constructing system as claimed in claim 9, wherein said constructing system further comprising an identification inputting unit inputting a name of an area, a start line of the area and the number of lines included in the area as the identification.
